EXPERIENCE

Web Developer | General Assembly | October 2017 – January 2018

Achieved over 500 coding hours in immersive web development course.

- **Nozama:** Nozama is an E commerce single page application built on a Node/Express backend with a Mongo database and a JavaScript built client with the purpose of emulating a site like Amazon.com. In addition I used Stripe, a third party software platform for the purpose of managing transactions. <https://tbdwidi.github.io/Nozama-Front-End/>
- **Trail Tracker:** The Trail Tracker app is a single page application built with JavaScript/jQuery/Handlebars client and a backend built with Ruby on Rails with a PostgreSQL database with the purpose of supplying a the user with a database of HD trail maps for numerous ski resorts. <https://bcameron1489.github.io/trail-tracker-client/>
- **Mean Auth App:** The Mean Auth App is a custom template I built for users knew to running MEAN stack. It comes complete with custom views, full authorization and secure for both development and production

Driver and Logistics | Peapod by Stop 'n Shop | April 2012 — June 2017

- Coordinated deliveries with customers and secondary warehouses. Peapod taught me the importance of planning and how to quickly and effectively communicate with my colleagues.
